

VMS

Vertical Mount Support

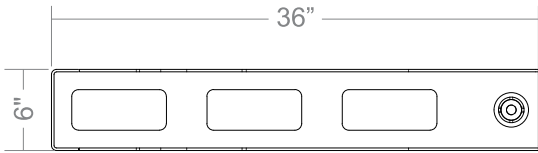

The VMS supports a SonicAire fan from a vertical building structure such as a column or wall. The VMS cantilevers the fan away from the structure and allows for the fan to be mounted at various elevations on the vertical surface..

Note: SonicAire does not provide attachment hardware for the VMS. The necessary hardware is determined by the structure to which the VMS is secured.

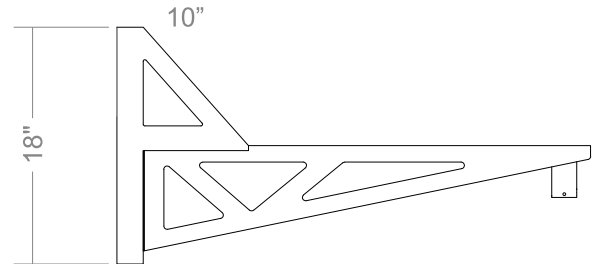

Approx. Weight: 30 lbs
(in addition to fan assembly)
